

Research shows major benefits from preschool education

Dear families,

Our main goal is to keep your child safe and happy. We strive to keep consistency in the classroom with staff and routines.

According to new [research done by Stanford University](#), children attending high-quality preschool do better in school and in life. At Tiniciti we share a small amount of your child's life and feel privileged to be given the opportunity.

Stanford's research has found that these children are less likely to be retained in a grade or placed in a special education setting. They are also less likely to become involved in crime and more likely to graduate from high school, go to college, and achieve higher earnings.

Keeping this in mind, our goal is to impact our students' lives educationally, emotionally and socially so they are provided with a strong foundation for their educational career.

We do lesson planning each week that touches on all Multiple Intelligences age-appropriate areas that stimulate the physical, cognitive, and emotional needs of your child.

We aim to provide not just a challenging academic program but

Challenging academic program but a secure, personal environment of care to each individual student.
